AITECH: Performance Recovery Plan

Faisla karne wali SEO report | 25 October 2026

Website: https://aitech.edu.pk/ | Zaban: Roman Urdu | GSC period comparison + saved website audit evidence

Seedha jawab: Pehle existing pages aur technical templates theek karein. Abhi bulk naye course/city pages banana priority nahi. Naye pages sirf alag, verified search intent aur real course offering ke liye banayein.

Metric	Previous 28 days	Latest 28 days	Tabdeeli
Clicks	3,034	2,542	-492 (-16.2%)
Impressions	129,306	120,875	-6.5%
CTR	2.35%	2.10%	-0.24 percentage points
Average position	8.15	7.74	Behtar (lower is better)

Period: 28 Aug-24 Sep versus 25 Sep-22 Oct 2026. GSC comparison export 25 Oct ko li gayi; totals saved daily chart se calculate kiye gaye. Report Web search, tamam countries/devices par hai.

Is ka matlab: Sitewide ranking crash ka saboot nahi. Impressions aur CTR dono kam hue; kuch individual pages ki positions kharab hui hain. Technical defects confirmed hain, lekin unhein isi drop ka proven sabab kehna durust nahi.

Is report ke saath raw comparison CSVs PDF attachments mein shamil hain: 702 page rows aur 1,635 query rows. GSC position average hoti hai, live fixed Google rank nahi. Query aur page tables alag hain; in se exact query-to-page join assume nahi kiya gaya.

1. Traffic kahan kam hua - asal diagnosis

Do result pages ka combined drop 563 clicks hai: main result guide -368 aur batch-3 result page -195. Yeh net site decline (-492) se zyada hai, kyun ke doosre pages ne gains se kuch loss offset kiya. Is ka matlab yeh nahi ke tamam loss sirf in do pages ki wajah se hai.

Page / signal	Kya hua	Kya karna hai
/how-to-check-navttc-nts-result-online/	1,059 -> 691 clicks; impressions 17,588 -> 14,357; position 5.27 -> 5.03; CTR 6.02% -> 4.81%.	Rank improve hui, visibility aur CTR kam hue. Current result status, official source, concise steps aur title/snippet review karein.
/navttc-batch-3-nts-result-2026/	222 -> 27 clicks; impressions 4,052 -> 628; position 6.73 -> 6.72.	Stable rank ke saath visibility drop. Event demand/coverage change mumkin hai; expiry/status verify karein. Fresh batch invent na karein.
Homepage	527 -> 452 clicks; position 6.08 -> 5.79; CTR 4.02% -> 3.55%.	Brand/query mix aur snippet check; course/campus navigation aur genuine trust proof improve karein.
/best-ai-training-institute-islamabad/	67 -> 30 clicks; position 8.38 -> 9.63; impressions bhi kam.	Yahan ranking weakness bhi hai. Real trainers/projects, clear AI course choice aur related course links add karein.

Business risk: Result-check traffic aur paid admissions ek jaisi cheez nahi. Course enquiries, qualified leads aur paid enrolments alag track kiye baghair organic clicks ko revenue ka substitute na banayein.

2. Sab se zyada clicks lose karne wale pages

URL path	Clicks old -> new	Delta	Avg position old -> new
/how-to-check-navttc-nts-result-online/	1059 -> 691	-368	5.27 -> 5.03
/navttc-batch-3-nts-result-2026/	222 -> 27	-195	6.73 -> 6.72
/	527 -> 452	-75	6.08 -> 5.79
/gujrat/	64 -> 26	-38	5.41 -> 4.92
/best-ai-training-institute-islamabad/	67 -> 30	-37	8.38 -> 9.63
/best-ai-tools-for-digital-marketing-in-pakistan-2026/	31 -> 12	-19	6.44 -> 10.5
/nts-navttc-pmysdp-batch-3-result/	41 -> 26	-15	5.77 -> 5.52
/courses/data-analytics/power-bi/	22 -> 7	-15	9.77 -> 11.02
/best-it-institute-in-islamabad/	25 -> 11	-14	9.49 -> 9.07
/navttc-skills-of-tomorrow/	18 -> 4	-14	8.25 -> 7.74
/islamabad/advanced-python-programming-course/	17 -> 3	-14	8.68 -> 9.2
/seo-title-web-development-course-in-gujrat-aitech/	16 -> 2	-14	7.87 -> 4.82
/islamabad/career-tracks/ai-automation/	19 -> 7	-12	6.36 -> 8.99
/online-ai-courses-in-pakistan-with-certificate/	12 -> 2	-10	13.99 -> 9.88
/author/zainabrafiq20gmail-com/page/3/	12 -> 2	-10	1.77 -> 18.33

Low-volume rows ko direction samajhne ke liye use karein; ek-do clicks ki movement par major redesign ya redirect decide na karein. Full rows attached Pages.csv mein hain.

3. Keywords: actual GSC comparison

Keyword	Clicks old -> new	Delta	Avg position old -> new
navttc result check by roll number	125 -> 86	-39	3.64 -> 3.65
navttc result	95 -> 57	-38	4.71 -> 4.81
nts result check by roll number	36 -> 6	-30	6.87 -> 4.96
navttc result check online	156 -> 129	-27	3.85 -> 4.45
nts navttc result 2026	24 -> 3	-21	6.57 -> 7.37
navttc nts test result 2026	20 -> 2	-18	5.86 -> 7.34
navttc result check online 2026	112 -> 95	-17	4.57 -> 4.44
aitech	51 -> 36	-15	3.84 -> 1.24
adnan institute of technology islamabad	23 -> 8	-15	1.15 -> 1
navttc result 2026	20 -> 9	-11	5.84 -> 6.27
navttc result check	21 -> 11	-10	4.52 -> 3.98
aitech islamabad	10 -> 1	-9	1 -> 1
navttc batch 3 result 2026	12 -> 4	-8	4.45 -> 4.16
ai courses in islamabad	11 -> 3	-8	10.55 -> 14.93
navttc results check online	8 -> 1	-7	3.58 -> 3.98

NAVTTC queries par loss dominant hai. "nts result check by roll number" ki position 6.87 se 4.96 behtar hui, lekin impressions 1,226 se 170 hue. Ranking improve karna akela seasonal/event visibility ko restore nahi karta.

Comparison query export mein 1,635 available rows mili hain. Yeh Google par exist karne wale har keyword ki guaranteed complete listing nahi; anonymized/omitted queries aur grouping se totals differ kar sakte hain. Semrush full export ab bhi available nahi; is report ka diagnosis actual GSC data par hai.

4. Winners ko protect karein

URL path	Clicks old -> new	Gain
/how-to-check-navttc-nts-result-online-2026/	16 -> 125	+109
/cm-it-internship-program-2026/	0 -> 90	+90
/navttc-nts-result/	14 -> 38	+24
/courses/cybersecurity/	0 -> 22	+22
/ebay-dropshipping-course-islamabad/	0 -> 15	+15
/islamabad/	23 -> 37	+14
/how-to-apply-navttc-courses-online-2025/	10 -> 24	+14
/gujrat/courses/graphic-design/	4 -> 18	+14
/the-best-it-training-institute-in-gujrat/	0 -> 13	+13
/psdf/	98 -> 109	+11

In pages ko blind merge, rename ya redirect na karein. Result-guide variants ke beech overlap mumkin hai, lekin cannibalization prove karne ke liye same query par multiple URLs ki date-wise switching check karni hogi. Winner aur loser ka sirf topic similar hona proof nahi.

Rule: same intent/content prove ho to best existing URL select karein; internal links aur sitemap update, relevant 301 aur selected canonical verify karein. Alag intent ho to dono pages ko distinct purpose dein.

5. Technical fixes - pehle kis par kaam ho

Priority / owner	Evidence aur fix	Acceptance check
P0 - Developer / SEO	Canonical output ek source se render karein. /about-us/ par self + /about.html; advanced game development page par self + adanit.com canonical. Embedded full HTML/head markup clean karein.	Har selected indexable page par exactly one intended absolute HTTPS canonical; external/missing targets remove. GSC URL inspection sample verify.
P0 - Developer	HTTP homepage saved probe mein 200 HTTP par rahi. Har host/protocol variant ko HTTPS non-www par redirect; internal URLs aur sitemap HTTPS.	http, http-www, https-www -> single final HTTPS URL; no loop; final page 200.
P1 - Developer	Broken internal destinations /ai-automation-course/make-automation/, /blog.html aur /blog/what-is-web-development/. Parent links correct karein.	Important menus/course CTAs se valid relevant destination; irrelevant URLs homepage par bulk redirect na karein.
P1 - Developer	Mobile CWV: 148 poor URLs; LCP >4s group, INP >200ms overlapping issue group. Hero image, scripts, fonts aur interaction bottlenecks profile karein.	Representative templates mobile par test; target LCP <=2.5s, INP <=200ms, CLS <=0.1 at field p75; field recovery time allow karein.
P1 - SEO / Developer	GSC: 219,539 crawled-not-indexed aur 64,529 historical 404s. Tags/feeds/duplicate routes ka sampled inventory.	Useful indexable course pages prioritized; thin archives sitemap se remove/noindex as appropriate; genuine removed URLs valid 404/410; no indiscriminate indexing request.

Counts historical/discovered URLs hain; current sitemap ke against error percentage nahi. Saved crawl mein 1,702 firewall "Unauthorized Access" responses ko title, H1, thin-content ya SEO errors nahi gina gaya. Yeh Googlebot block ka proof bhi nahi; server logs aur GSC inspection se verify karein.

6. Existing pages par kaun se blocks chahiye

Page / priority	Blocks aur changes	Kyun
AI for Everyone course - P1	Current intake/date, Rs45,000 fee inclusions, weekly schedule, learning outcomes, trainer proof, real student projects, admission CTA. Sample testimonials aur replace-before-live note hata kar verified content dein.	Old 23 Sep intake aur placeholder proof trust aur enquiries ko affect kar sakte hain.
/ai-for-every-one/ - P1	Funded cohort eligibility, funding source, seat availability, selection process; paid AI offer se clear comparison/link.	PKR0 aur paid offering ko clearly differentiate karein; different products ko duplicate samajh kar merge na karein.
AI institute / AI course pages - P1	Beginner vs advanced course selector, actual curriculum, trainer profile, campus/mode, projects aur FAQs.	Existing visibility ko admissions intent se connect karein.
/gujrat/ and Islamabad campus hubs - P1	Verified address/map, contact/hours, campus photos, active local course cards aur next intake.	Gujrat clicks 64 -> 26 despite better average position; local offering/snippet relevance test karein.
CCNA pages - P2	Tuition vs exam voucher vs bundle fee comparison; lab equipment, trainer credentials, prerequisites, timetable.	Rs55k/Rs60k/Rs95k offers ki inclusions explain karein; prices ko automatically contradiction na kahein.
Result guides - P1	Last verified status, official result link, roll-number steps, troubleshooting, dated update history aur related eligible training options.	Useful answer upfront dein; outdated admissions ya misleading result availability avoid karein.

Har important course page par: fee, duration, delivery mode, campus, timings, prerequisites, syllabus, portfolio outcome, trainer, certification/exam details aur clear next step hona chahiye. Unsupported placement/job guarantees ya fabricated reviews publish na karein.

7. Naya page ya existing page update?

Recommendation: Pehle existing commercial pages ko improve karein. Neeche keyword figures last 3 months ke GSC averages hain, comparison-period ranks nahi. Proposed mapping editorial recommendation hai; actual keyword-to-page attribution abhi separately validate karni hai.

Intent / GSC signal	Decision	Implementation
AI courses Islamabad: position 10.8; 660 impressions	Existing pages update	AI hub/course selection ko clear karein; existing AI paths ka same-query overlap check before consolidation.
Python course Islamabad: 25.3; 229 impressions	Existing Python page update	/islamabad/advanced-python-programming-course/ ko advanced intent par focus; beginner offer existing inventory mein check, then gap decision.
Digital marketing: 40.4; 155 impressions / SEO: 38.7; 62	Existing dedicated pages first	Curriculum, fees, instructor, campaigns/projects aur internal links strengthen; naya duplicate city page abhi nahi.
Web development courses: 27.4; 200 impressions	Existing course + hub improve	Singular query average 7.7 (56 impressions) se intent/query mix farq dikh raha hai; query-page split validate karein.
Shopify: 13.2; 86 / Amazon: 18.8; 162	Existing dedicated offer first	Distinct syllabus and live projects. Separate page sirf jab separate taught product ho aur existing dedicated page na ho.
Campus admissions / course comparison	New conditional	Sirf unserved admissions process ya genuine multi-course comparison intent ho; pehle existing /courses/, /career-tracks/ aur city hubs improve karein.
Student case studies / trainer profiles	New conditional supporting pages	Real named evidence + consent, clear projects/outcomes; course pages se contextual links.
Mass city pages / yearly result clones	Do not expand now	Unique campus/service proof aur separate demand ke baghair duplication barhegi. Evergreen result guide par verified updates preferable where intent same.

8. 30 / 60 / 90 din ka execution plan

Window	Owner aur output	Measure
Day 1-7	Developer: canonical/head template, HTTPS rules, broken money-page links. SEO: 10 priority URL baseline + GSC inspection. Admissions: real fees/intakes verify.	One canonical per selected page; redirect checks pass; key links work; baseline archived.
Day 8-30	Content + admissions: AI paid/funded distinction, result status updates, homepage/campus blocks; course fees/trainer/project proof. Developer: mobile hero/scripts improvements.	10 priority pages complete; enquiry events tested; mobile lab bottlenecks reduced.
Day 31-60	SEO: query-to-page overlap check; limited consolidation only where proven. Improve Python, Power BI, digital marketing and SEO pages by opportunity.	Fixed query cohort CTR/position; commercial-page clicks and qualified organic enquiries versus baseline.
Day 61-90	Review field CWV, indexing samples and lead quality. Publish only validated missing-intent pages. Expand successful course template.	Field CWV trend; priority indexing status; organic enrolments and enquiry-to-enrolment rate.

Weekly dashboard: Course-page organic clicks; non-brand commercial queries; top 10 course pages clicks/impressions/CTR/position; WhatsApp/call/form enquiries; qualified leads; paid admissions. Result-guide traffic alag report karein.

Target setting: Pehle 2 hafton mein valid lead baseline establish karein. Us ke baad business target set karein. Ranking ya traffic recovery ka fixed percentage/time guarantee is evidence se justify nahi hota.

Monitoring same country/device/search type aur same query cohort par karein. Equal 28-day windows weekday mix control karte hain, lekin event demand/seasonality phir bhi differ kar sakti hai. Major changes ka date log maintain karein.

9. Evidence, limitations aur handover checklist

Strong evidence: Actual GSC period comparison; saved daily export totals; indexed/not-indexed and CWV UI observations; saved accessible HTML/protocol probes. Public page snapshots aur crawl evidence 24 Oct audit collection se hain; comparison export 25 Oct ka hai.

Abhi proven nahi: Exact cause of demand change, Google update impact, same-query cannibalization, server-wide Googlebot blocking, backlink-loss effect, aur actual organic enquiry/revenue decline. In claims ko report findings ke taur par present nahi kiya gaya.

Remaining validation: Server logs + selected GSC URL inspections, GA4/CRM conversion baseline, same-query page switching, aur full Semrush organic/backlink exports. In ke baghair bhi technical/content action list par kaam start ho sakta hai.

What is already working: Branded queries strong positions par hain; overall average position improve hui; kuch result/current-programme pages growth la rahe hain; existing course/campus URLs par visibility available hai. Is liye wholesale rebuild ki jagah targeted recovery sensible hai.

Developer handover: Staging/template change -> representative course, post, campus, archive tests -> canonicals/redirects/links verify -> publish -> GSC inspection sample -> weekly tracking. Important ranking URLs ko evidence ke baghair delete ya rename na karein.
